

How to find the webcam URL:

Open your internet browser and navigate to the webcam page. Right click on the webcam image and click "Properties". Copy the URL from the Address field.

How to add a webcam:

Click the "+" icon in the controls menu. Enter the webcam URL, Webcam Name and Refresh Rate in seconds of the webcam you want to watch. Click ok. The webcam will now appear in your webcam list.

To watch a webcam:

Double click the webcam in your webcam list. It will appear thumbnailled in the Webcams menu. You can click on the thumbnail to view it full size in the Viewer window, where you can zoom in and out, or use that cam as a screensaver. Click the "X" button on the webcam to stop it. Click the circular arrow button on the webcam to refresh it.

To save all new webcam images:

Check the "AutoSave New Pictures" box. Now all new images from the webcams you are watching will be saved in the /cam/ directory in the program folder.

Tips:

-Move your mouse over any button or text field to see what it does.

-You can only watch .jpg, .gif and .bmp images.

-The status bar under each watched webcam's thumbnail notifies you of image download progress.

-The statusbar at the bottom of the screen will notify you when it saves a new picture.

-You can edit an existing webcam by

selecting it in the Webcam Listing and clicking the edit button (icon that looks like a document)

-Stop all watched cams by clicking the "X" button in the controls list.

-Start all watched cams by clicking the check mark button in the controls list.
